NUMBERING SYSTEM

In 1979, a new numbering system was implemented by the Code Commission which facilitates the organization of sections. This system divides existing chapters into "parts" so that several related, but distinct, subjects can be compiled in one chapter. The new numbering system consists of three-tier numbers rather than the former two-tier numbers. Thus, former chapter 29 of title 4 (former §§ 4-2901 — 4-2926) was redesignated in 1979 and organized into two parts, §§ 4-29-101 — 4-29-120 and 4-29-201 — 4-29-207. The number in the first tier represents the title; the second tier represents the chapter; and the last tier represents the part and section.

4	-	29	-	1	10
Title		Chap.		Part	Section

For example, § 4-29-110 is the tenth section in the first part of chapter 29 of title 4. Section 4-29-203 is the third section in the second part of chapter 29 of title 4.

Where former two-tier section numbers have been transformed into this three-tier system, a parallel reference table is provided showing the disposition of the former sections. Furthermore, the former two-tier section number appears in the history line of each section transformed to the three-tier system.

Code sections are divided into subsections. A subsection may be further divided into subdivisions. The first level of a section is a subsection, and all subsequent divisions of that subsection are referred to as subdivisions. A subsection is designated by a lower case letter in parenthesis. If a section has only one subsection, the lower case designation does not appear, even if that subsection is subdivided; any subsequent division of that single subsection is designated and referred to by the appropriate subdivision designation. The designations are as follows:

First level (subsections): (a), (b), (c), etc.
Second level (subdivisions): (1), (2), (3), etc.
Third level (subdivisions): (A), (B), (C), etc.
Fourth level (subdivisions): (i), (ii), (iii), etc.
Fifth through eighth levels (subdivisions) repeat the above designations but italicize the designations:
(a), *(b)*, *(c)*, etc.
(1), *(2)*, *(3)*, etc.

For example, if § 1-1-101 is divided into two paragraphs designated as (a) and (b), those designated paragraphs are referred to as subsections, subsection (a) and subsection (b). If either subsection is further divided, those further divided levels of the subsection are subdivisions.

Therefore, if subsection (a) is divided into three additional levels: (a)(1), (a)(2), and (a)(3), those levels within subsection (a) are referred to as

subdivisions: subdivision (a)(1), subdivision (a)(2), and subdivision (a)(3). Any subsequent further division of a subdivision is simply another subdivision. If subdivision (a)(1) is divided into three additional levels, (a)(1)(A), (a)(1)(B), and (a)(1)(C), those levels are also called subdivisions, as are the levels if subdivision (C) is further divided into additional levels, which would be subdivisions (i), (ii), (iii), etc. Example citation: § 1-1-101(a)(1)(A)(i).

Code Section Number Changes Since 1955

This table shows the current disposition of Tennessee Code Annotated sections that have been transferred from one Code location to another. It also lists the disposition of earlier statutes that had the same TCA section designation later used by another statute. Finally, for statutes with two-unit section numbers (in use between 1955 and 1984 and gradually converted to three-unit numbers beginning in 1979), it gives the reason (repeal, obsolescence, etc.) why some two-unit statutes were not carried over into the current three-unit system.

Bracketed numbers after an entry in the "Former Sections" column indicate which version of the section number is involved. Many section numbers have been reused one or more times, with the different versions containing unrelated subject matter. An entry followed by "[1]" would be for the first use made of a section number, "[2]" denotes the second use made of that number, etc.

See the Preface for a key to abbreviations used in this table.

Note: Mortality rates contained in the 1980 Commissioners Standard Ordinary Table were obtained from experience of 1970-1975, but contained an added element designed to generate life insurance reserves of a conservative nature in keeping with the long-term guarantees inherent in life insurance contracts. Premiums for life insurance policies, on the other hand, are based on assumptions that include expected mortality experience.

Mortality rates for the 1983 Individual Annuity Tables are, again, conservative as related to the actual and projected experience upon which they are based.
* Projected to 1983.

Annuity and Valuation Tables

Explanation of Use. The following annuity tables are not computed from interest tables upon the mere expectancy of life as given in the mortality tables at a given age, but by a determination of what amount, if drawing a specified rate of interest, would be required to pay an annuity, such determination being computed upon the average chance of life or death within the year at a given age and for each subsequent year to the extremity of human life. The numbers in the tables give the present value of $1 due at the end of each year during the life of a person of specified age. It is from these tables that the present value of a life estate or annuity is usually required to be determined by the statutes in the list preceding the mortality tables. The percentages given are those ordinarily used in the valuation of estates and not those used by insurance companies to determine premiums or value polices.

Present Value of Annuities. To find the present value of an annuity based on the life of a person from the following tables multiply the yearly payment by the number found opposite the present age of the person upon whose life the annuity is based in the column for the applicable percent.

Present Value of Life Estates and Remainders. To find the present value of a life estate or the use of the income of a specified sum for life multiply the total value, in which the life estate exists, by the applicable per cent, then multiply that product by the number opposite the age of the life tenant in the proper annuity table in the column for the applicable percent (the same percentage should be used throughout). The value of the remainder interest equals the value of the property minus the value of the life estate.

Derivation of Tables.

Table I is based on the Actuaries' Combined Experience Table of Mortality.

Table II is based on the American Experience Table of Mortality.

Table III is based on the Carlisle Table of Mortality with interest at six percent.

Table IV is based on the Commissioners 1958 Standard Ordinary Table of Mortality with interest at six percent.

Table V is derived from U.S. Treasury Regulations § 20.2031-10.

Table VI is based on United States Life Tables: 1969-1971.

Tables VII-A and VII-B are based on U.S. Treasury Regulations §§ 20.2031-7(f) and 25.2512-5(f) and are for valuing estates of decedents dying after November 30, 1983.

Tables VIII-A, VIII-B, and VIII-C, are based on U.S. Treasury Regulations §§ 20.2031-10(f) and 25.2512-9(f) and are for valuing estates of decedents dying before December 1, 1983.

Table IX is a Present Value Table.

This table is for computing federal estate tax with interest at 6% and is applicable to estates of decedents dying after December 31, 1970. It was derived from U. S. Treasury Regulation § 20.2031-10 which prescribes the use of such table in determining the value of an annuity which is payable annually at the end of each year during the life of an individual. If the annuity is payable at the end of semi-annual, quarterly, monthly or weekly periods the value should be determined by multiplying the aggregate amount to be paid within the year by the amount opposite the number of years nearest the actual age of the person whose life measures the duration of the annuity and such product so obtained is then multiplied by whichever the following factors is appropriate:

1.0148 for semi-annual payments.
1.0222 for quarterly payments.
1.0272 for monthly payments.
1.0291 for weekly payments.

TABLE IX

(Present Value)

(The following table may be used for ascertaining the present value of any sum at varying rates percent for any number of years from one to seventy-five inclusive. By its use, the present value of an annuity certain can be ascertained, as well as the amount of damages properly awardable for death or permanent injury arising from the wrongful act, negligence or default of another, if the person so killed or injured, or his family or next of kin were, by such death or injury, deprived of a known, fixed and certain amount of earnings, salary of other income for a definite number of years. The table is computed on the basis of compound interest, the formula being $I - (I + i)^{-n} - I - v^n$.)
